

## Year 1

This week in Year 1 we have been problem solving in maths. We have used our knowledge of doubling and halving to help us to solve problems. We have also been looking at coins and using money to pay for things.

In geography we have looked at maps and created a route map of our trip. We used ordinal numbers to order the places we visited on our trip and drew the route we took. Then we matched the different modes of transport to the different parts of the route.

In art we have been looking at the work of Monet, particularly his water and boat paintings. We discussed which ones we liked the most and why.
